

Muhammad Huzaifa

Software Engineer, Full-Stack

Karachi, Pakistan • +92 341 8183070 • huzaifa62012@gmail.com

huzaifa620.github.io • github.com/huzaifa620 • linkedin.com/in/muhammad-huzaifa-2a3821249

Full-stack engineer with 3+ years shipping web, mobile and AI-backed products. Most of my work is JavaScript and TypeScript on the front (React, Next.js, Vue.js) with Python or NestJS behind it (Django, FastAPI), plus React Native for mobile. In practice that means REST APIs, relational and NoSQL data models, real-time features over WebSockets and WebRTC, Stripe payments, and data pipelines handling 50,000+ records a month. I work in an Agile team, ship through Docker and CI/CD with automated quality gates, and review other people's code. Won 3rd Prize in the AI Track at the Solana Breakout Hackathon (\$15,000, from 8,300+ entries).

PROFESSIONAL EXPERIENCE

Rehani Soko LLC • Remote (US company)

Apr 2023 – Present

Software Developer (Full-Time since Nov 2024; Contract Apr 2023 – Oct 2024)

- Lead most of the feature work on a Vue.js and Django real estate platform. Rebuilt the search and property visualisation pages and improved page-load performance.
- Wrote the scrapers and cleaning pipeline that pull in around 50,000 listings a month from external sites. Data reliability went up about 35% once the consistency checks were in place.
- Built the React/Vite admin panel the content team uses day to day to manage the catalogue.
- Added the LLM features: WhatsApp and web assistants, automated content generation, and semantic matching on embeddings. It runs across both Anthropic and OpenAI, and I track token cost per request so spend doesn't quietly get away from us.
- Own the async side of the platform: Celery workers, Redis queues, and the scheduled jobs.
- Ship through a GitLab pipeline (Docker build, SonarQube gate, migrations, staged deploy). I review teammates' merge requests, and caught one stale-base merge that quietly reverted two backend modules and about 3,000 lines of unrelated work while the tests still passed.

Lovum Group • Remote (US company)

Jan 2024 – Dec 2025

Software Engineer (Part-Time)

- Worked on two of their products, EduEssential and Waridi, building the Next.js frontends and the Python APIs behind them, and getting both to scale.
- Designed and wired up the APIs, including the endpoints feeding their ML features.

Algorithm Consulting (Pvt) Ltd • Karachi, Pakistan

May 2024 – Oct 2024

Junior Developer

- Worked on an ASP.NET enterprise application, mostly new features and the bug queue. A lot of it was pairing with senior engineers on query performance and release stability.

CrossWing Inc. • Remote (Ontario, Canada)

Mar 2023 – Nov 2023

Full-Stack Developer

- Built and maintained the React.js web apps that sat on top of their robotics products.
- Collaborated with the AI/ML engineers and product managers on features connecting the hardware to the web side.

Profecia Links Consulting Pvt. Ltd. • Remote (Abu Dhabi, UAE)

May 2022 – Aug 2022

Software Engineer (A1)

- Automated client data-extraction workflows using Import.io, which cut out a lot of manual collection.

SELECTED PROJECTS

self-healing-rag • Eval-Gated AI Service

Aug 2026

Python, FastAPI, LangGraph, pytest, GitHub Actions, Docker, NumPy

- A FastAPI service that critiques its own answers, retries with a reworded query when a draft isn't supported, and refuses to answer rather than guess.
- Wrote an automated evaluation suite over a 60-case regression set and wired it into **GitHub Actions as a merge gate**, so the build fails if quality, latency or cost regress against a committed baseline. Demonstrated with an open PR where CI blocks the merge.
- Input validation layer with Luhn-checked PII redaction and injection screening, covered by unit tests. github.com/huzaifa620/self-healing-rag

Wash42 · Car-Wash Booking & Subscription App React Native, Expo, TanStack Query, FastAPI, REST APIs - Built the iOS and Android app: subscription plans, a wash-menu catalogue the client can configure themselves, and a payments layer that isn't tied to one provider (currently ValorPay). - Added push notifications and made the app usable on a bad connection by persisting React Query state. Set up the EAS Build and Submit pipeline that pushes releases to both stores.	Jan 2026 – Aug 2026
Dugan Psychiatry · Mental-Health Platform (Mobile) React Native, Expo, Clerk, Socket.IO, WebRTC, Stripe, NestJS, PostgreSQL - Built the patient and psychiatrist app: mood tracking with charts, 11 therapeutic mini-games, and a resources library. - Handled the real-time side, Socket.IO chat and WebRTC video consultations, plus Stripe payments for appointments and role-based access. Shipped to both stores through EAS Build.	Jan 2026 – Aug 2026
F1GPT · Formula One AI Chatbot Next.js 15, RAG, LangChain, Astra DB, Puppeteer, LLM API A Retrieval-Augmented Generation chatbot for F1 stats and rules. I wrote the scrapers and the chunking pipeline, stored the embeddings in Astra DB, and put a streaming LLM layer on top.	Aug 2025
SmartScan Billing Assistant YOLOv8, Computer Vision, Object Detection & Tracking, Python A checkout system that recognises products from a camera feed and adds up the bill. Ended up deployed across 1,200+ products in a working supermarket.	May 2024 – Jul 2024

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript (ES6+), C#, HTML5, CSS3, SQL

Frontend: React.js, Next.js, Vue.js, Nuxt, Tailwind CSS, NativeWind, responsive UI

Backend: Django, FastAPI, NestJS, Node.js, Express.js, Flask, ASP.NET, REST APIs, GraphQL, Celery

Mobile: React Native, Expo (SDK 54), EAS Build/Submit, Push Notifications, WebRTC, App Store & Play Store deployment

AI/ML & LLMs: RAG, LangChain, LangGraph, Embeddings, Vector Search, OpenAI & Anthropic APIs, Scikit-learn, Pandas, NumPy, YOLOv8

Integrations & Realtime: Stripe, Clerk, Socket.IO, WebSockets, OAuth / token auth, Azure AD B2C, Privy

Data & Automation: Selenium, Puppeteer, BeautifulSoup, Web Scraping, ETL, Data Pipelines

Databases & Caching: PostgreSQL, MySQL, MongoDB, Firestore, Redis

DevOps & Quality: Docker, GitLab CI/CD, GitHub Actions, SonarQube, pytest, unit testing, code review, Git, Linux, Agile

AWARDS & PUBLICATIONS

- 3rd Prize, AI Track (\$15,000), Solana Breakout Hackathon (Global).** Selected among 8,300+ submissions for Agent Arc, a non-custodial AI-driven trading terminal on Solana; led frontend (Next.js 15, Privy auth, wallet integration, AI/ML API execution).
- Huzaifa, M. et al. (2023). *An Integrated Approach to Robotic Object Grasping and Manipulation using 6D Pose Estimation.* arXiv:2411.13205.
- Huzaifa, M. et al. (2025). *Smart Shelf Advertising using Real-Time Product Segmentation and Interaction on Low-Cost Edge Devices.* DOI:10.13140/RG.2.2.34475.96800.

EDUCATION

NED University of Engineering & Technology, B.E. 2019 – 2023 | Karachi, Pakistan

Computer & Information Systems Engineering. GPA 3.289/4.0. Coursework: Data Structures & Algorithms, Software Engineering, Artificial Intelligence, Machine Learning.
